

Safe and dependable transport for high-purity tanks

The int2 Solutions JO-Dolly™ transports metal and plastic tanks up to 27" in diameter, including standard metal tanks and plastic bag retainers.

A low-profile cradle and low center of gravity reduce tip-over potential across thresholds and ramps. The optional ergonomic handle connects to the base, so users can move the dolly without pushing the tank.

Electropolished stainless steel is easy to clean and corrosion resistant. Rounded edges help protect walls and equipment. All materials are suitable for cleanroom environments.

Attributes & Advantages

- Low-profile cradle for stable transport
- Front access to tank outlet valves
- Optional autoclavable wheels and bearings eliminate tank lifting for sterilization
- Rigid, swivel and braking caster options
- Optional removable ergonomic handle
- Stacks up to five high with the removable handle and stacking option
- Improved safety for people, equipment and product
