

One Source. One Kit. Ready to Run.

Custom component kits simplify procurement, inventory management, and assembly by delivering all required components in a single, process-specific package. By consolidating multiple parts into one kit, int2 Solutions can reduce sourcing complexity, minimize assembly errors, and improve operational efficiency.

Designed around your unique application requirements, custom kits help ensure component compatibility, streamline production readiness, and reduce the time operators spend identifying and gathering materials. The result is improved process consistency, reduced downtime, and a more efficient supply chain that supports reliable biopharmaceutical manufacturing. Typical applications include:

- Proof of concept designs
- R&D bioreactor additional lines
- Pilot plant assemblies

Attributes & Advantages

- On site design consultation & support
- Completely custom kitting options
- Fully agnostic component integration
- Kitting in a controlled environment
- ISO 9001:2015 certified facility
- Available unprocessed, irradiated or autoclaved

***Whether it's a proof of concept, prototype, or at scale...
Let int2 Connect You!***

Single Use Assemblies

Fully configured single-use component kits that reduce assembly time, streamline procurement, and accelerate production readiness.

Downpacking

Transform industrial-scale bulk inventory into precision-packed, small-quantity packs

Single Use Components

Wide range of components from nearly every manufacturer:

- Carolina Components Group
- Eldon James
- Nordson
- CPC Biotech
- And Many More...

Tubing

Nearly all silicone, TPE and specialty tubing brands and styles available:

- Carolina Components Group
- AdvantaPure
- Saint Gobain
- Watson Marlow
- Gore
